

Sustainable Development Goals

6 - Clean Water and Sanitation

6 CLEAN WATER AND SANITATION

Water is essential across all sectors of society for producing food, energy, goods, and services. Over the past century, global water use has more than doubled the rate of population growth. Many water sources suffer from drought, increased pollution, or both. Clean water and adequate sanitation facilities are crucial for ensuring health and opportunities for individuals and families. Water resources need to be managed efficiently, responsibly, and fairly, and adequate sanitation and hygiene must be provided for everyone.

6 - Clean Water and Sanitation

The Quality Assurance Department at Al-Noor University held a workshop titled "Medical Waste and Its Impact on the Environment," presented by Dr. Nadhim Allawi Al-Shahri, Director of the Quality Assurance and University Performance Department, and Omar Shihab Ahmed an employee at the department.
