

Sustainable Development Goals

9 - Industry, Innovation and infrastructure

A comprehensive and sustainable approach to manufacturing, alongside innovation and infrastructure, can unleash dynamic and competitive economic forces that generate job opportunities and income. It plays a key role in introducing and advancing new technologies, facilitating international trade, and enabling the efficient use of resources. However, the world still has a long way to go to fully realize these potentials. In particular, the least developed countries need to accelerate the development of their manufacturing sectors if they wish to achieve the 2030 goals and increase investment in scientific research and innovation.

Sustainable Development Goals

9 - Industry, Innovation and infrastructure

The College of Engineering at the university held a panel discussion on the Mosul and Badush dams, which included a scientific presentation on the current state of Mosul Dam, the ongoing grouting work on its foundations, as well as the feasibility of constructing the Badush Dam. The workshop lectures were delivered by Senior Chief Engineer Hatem Tayeb, Director of the Mosul Dam Project, and Senior Geologist at the Mosul Dam Marwan Abdel Ilah. They also answered the attendees' questions and engaged with the comments made by the college faculty members.
