Digital Student Information System (SIS)

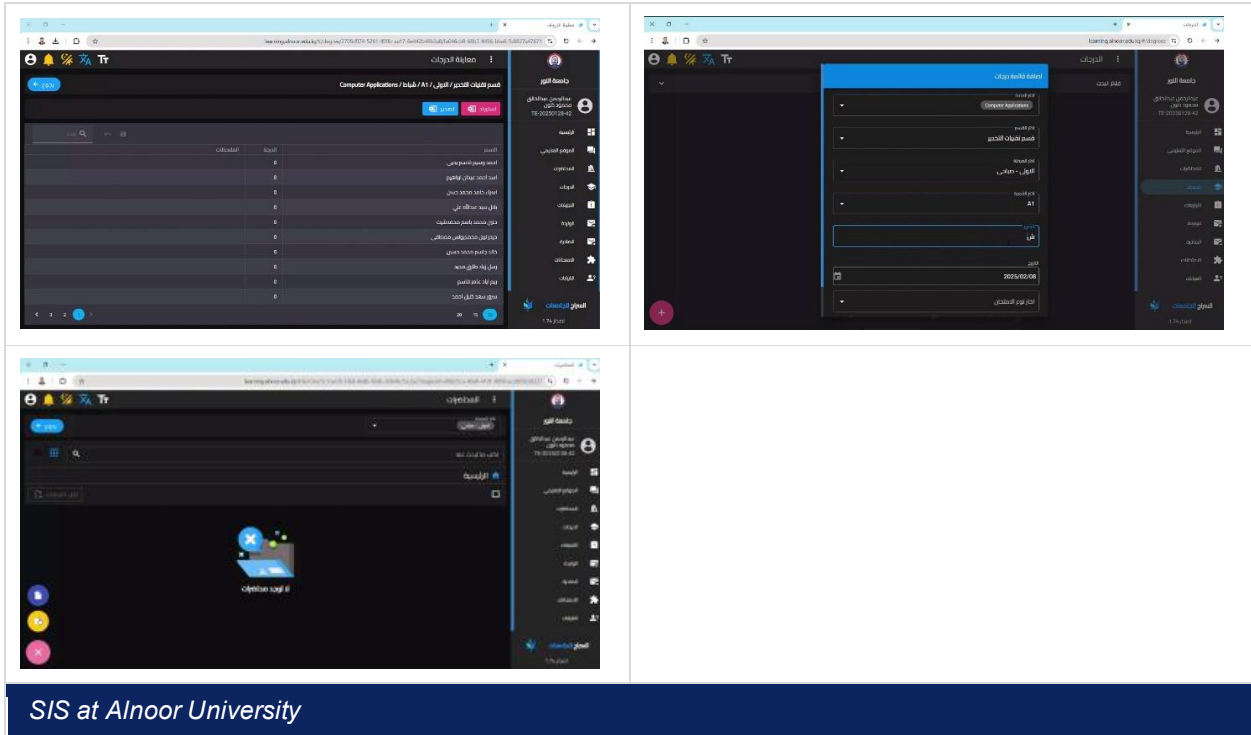

Alnoor University operates an integrated Student Information System (SIS) to digitize academic and administrative processes through secure user authentication and role-based access. The system enables authorized faculty members and administrators to manage student information, course materials, attendance, examinations, grades, and official correspondence electronically.

The implementation of the SIS enhances transparency, accountability, and data integrity by maintaining digital records and minimizing manual administrative procedures. Access to system functions is restricted to authorized users, ensuring secure management of academic information and reducing opportunities for unauthorized modifications or administrative irregularities.

Contents:

- Secure login page with authenticated user access.
- User profile displaying individual staff account information.
- Digital lecture management module.
- Electronic grade entry and management system.
- Online examination creation and management.
- Student selection and assessment interface.
- Academic records and administrative management modules.

2 Institutional Communication and Information System

Al-Noor University utilizes an official institutional email system based on the university domain (@alnoor.edu.iq) for formal communication among administrative departments, academic staff, and university units. The system is used to distribute official announcements, exchange correspondence, share academic and administrative documents, and deliver registration forms, research support forms, and other official communications, ensuring secure, traceable, and efficient institutional communication.

3 Public Information Disclosure and Transparency

Al-Noor University is committed to transparency by providing public access to essential institutional information through its official website and digital communication platforms. The university regularly publishes news, announcements, academic calendars, admission information, institutional regulations, contact details, research activities, and university achievements. This ensures that students, staff, researchers, and the wider community have timely access to accurate and up-to-date information, promoting accountability, openness, and effective stakeholder engagement.

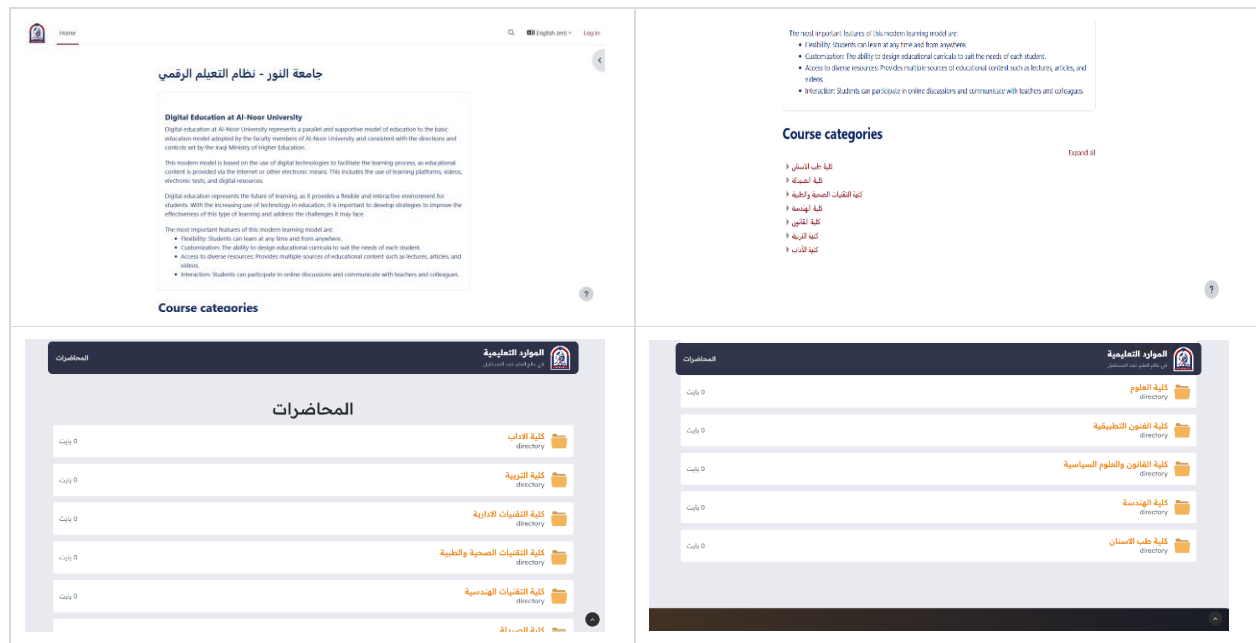

4 Learning Management System (LMS) and Digital Learning Environment

Al-Noor University utilizes a Learning Management System (LMS) and complementary digital learning platforms to support technology-enhanced education and improve digital literacy among students and faculty members. The LMS enables instructors to manage courses, upload learning materials, create assignments and assessments, communicate with students, and monitor academic progress in a secure online environment.

In addition, the College of Open Learning provides online educational services and digital course access through its dedicated platform, expanding opportunities for flexible and accessible learning. These digital platforms promote continuous learning, enhance student engagement, and strengthen the university's digital education ecosystem.

5 Digital Library and Electronic Learning Resources

Al-Noor University provides students and academic staff with access to a digital library and a wide range of electronic learning resources to support education, research, and lifelong learning. The university's digital library offers online access to academic books, journals, theses, research materials, and other educational resources through its digital platform. These services enable users to efficiently search, access, and utilize reliable academic information, enhancing

information literacy, research capabilities, and independent learning while supporting the university's digital transformation initiatives.

AI Chatbot and Digital Student Support

Al-Noor University has implemented an AI-powered chatbot to provide intelligent digital support for students, academic staff, and visitors. The chatbot offers instant access to university information, including admission procedures, academic services, university regulations, campus facilities, and frequently asked questions. By providing 24/7 assistance through an interactive digital platform, the AI chatbot enhances user experience, improves access to information, promotes digital engagement, and strengthens digital literacy by encouraging the effective use of artificial intelligence technologies within the university community.
